<u>Q</u>	0	1	2	3	4	5	6	7	8	9
$ar[10]$	3	2	-1	5	6	8	2	3	2	6

Q : 3

$$\begin{array}{l} 1 \ 4 : 12 \\ 3 \ 6 : 21 \\ 1 \ 7 : 25 \end{array}$$

pdca:

→ calculate  $Pf[i]$

$Pf[i] = \text{Sum of all elements } [0 \dots i]$

$Pf[0] = ar[0]$

$Pf[i] = Pf[i-1] + ar[i]$

$i=1; i < N; i++ \{$  → Err  $i=0$

$Tc: O(N)$

→ calculate sum for each query

while (Q -->) {

$Tc: O(Q)$

// say input  $i, j$

// we need to get sum of all  $[i-j]$

$$[0-j] = [0, i-1] + [i, j]$$

$$Pf[j] = Pf[i-1] + \text{sum}(i-j)$$

$$Pf[i] = 0$$

$$\text{sum}(i-j) = Pf[j] - Pf[i-1]$$

else

$$\text{sum}[0-j] = Pf[j]$$

overall TC :

$$\Rightarrow O(N+Q)$$

SC:  $\Rightarrow O(N)$ : new  $Pf[]$

$\Rightarrow O(1)$ : changing input array.

Given N array elements = 0

	0	1	2	3	4	5	6
$ar[7] =$	0	0	0	0	0	0	0
					4	4	4
					-1	-1	-1
	2	2	2	2	2	2	2
					1	1	1
2	9	:					
3	-1	:					
0	2	:					
4	1						

idea:

For every query private q  
update array.

while ( $Q \neq 0$ ) {

// Given finden a & val v

i = a ; i < N ; i = i + 1 {

ar[i] = ar[i] + v

T.C:  $\Theta(N \cdot Q)$  S.C:  $\Theta(1)$

pden:

$a_1$

$a_1$

$a_2$

$a_3$

$a_4$

rdca:

$$ar[7] =$$

Q query

$\begin{matrix} \text{ind} & 6 \\ \underline{2} & 4 \\ 3 & -1 \\ 0 & 2 \\ 4 & ! \end{matrix}$ 
  
 val

// apply pf m above

0	1	2	3	4	5	6
0	0	0	0	0	0	0
12	14	-1	11			

Pseudo Code

rdca 2:

- For every query
- during update array
- Once all updates
- are done apply pf[]

TC:  $O(Q + N)$

SC:  $O(1)$

```

while (Q --) {
  // given index a & value v
  ar[a] += v
  // Because 2 queries can have same index
  // Apply pf[] in given array.
  // Update same array itself
  // ar[0] → no change
  p = 1; i < N; i++) {
    ar[i] = ar[i] + ar[i-1]
  }
}

```

## 68) Rain water trapped?

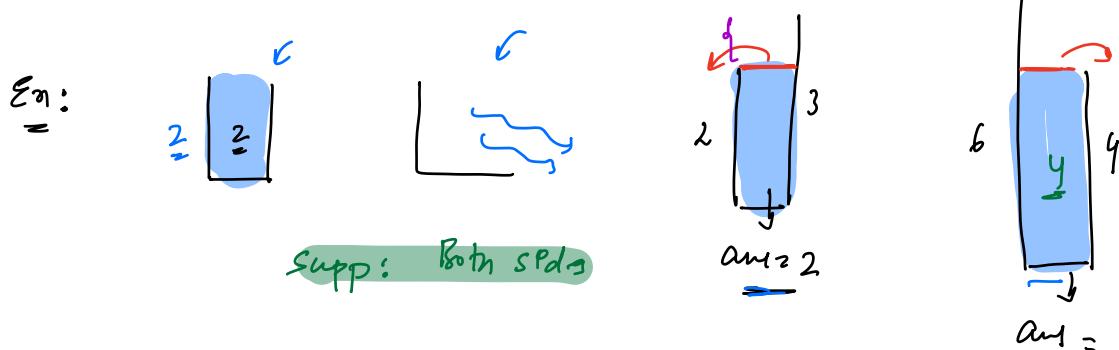

Given  $N$  array elements, where  $arr[i]$  represents height of the building

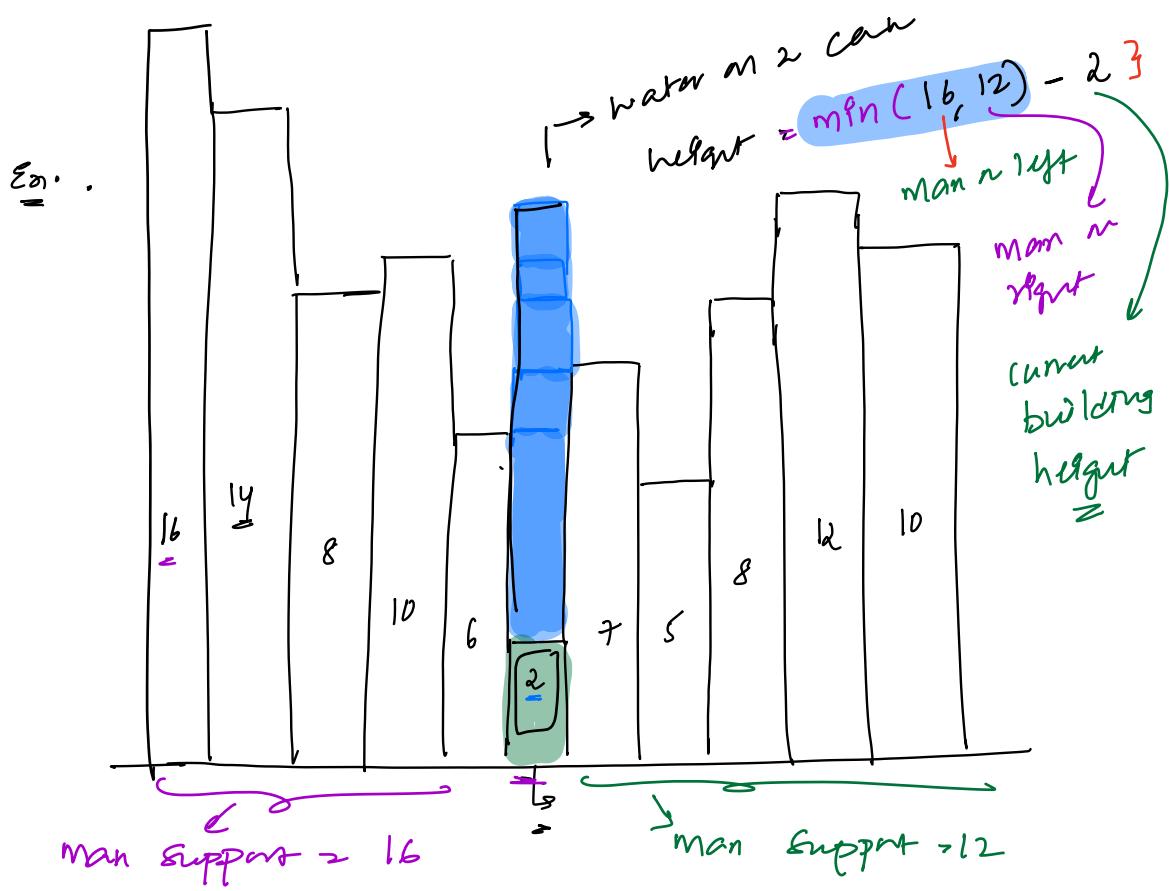

Return amount of water trapped on all buildings

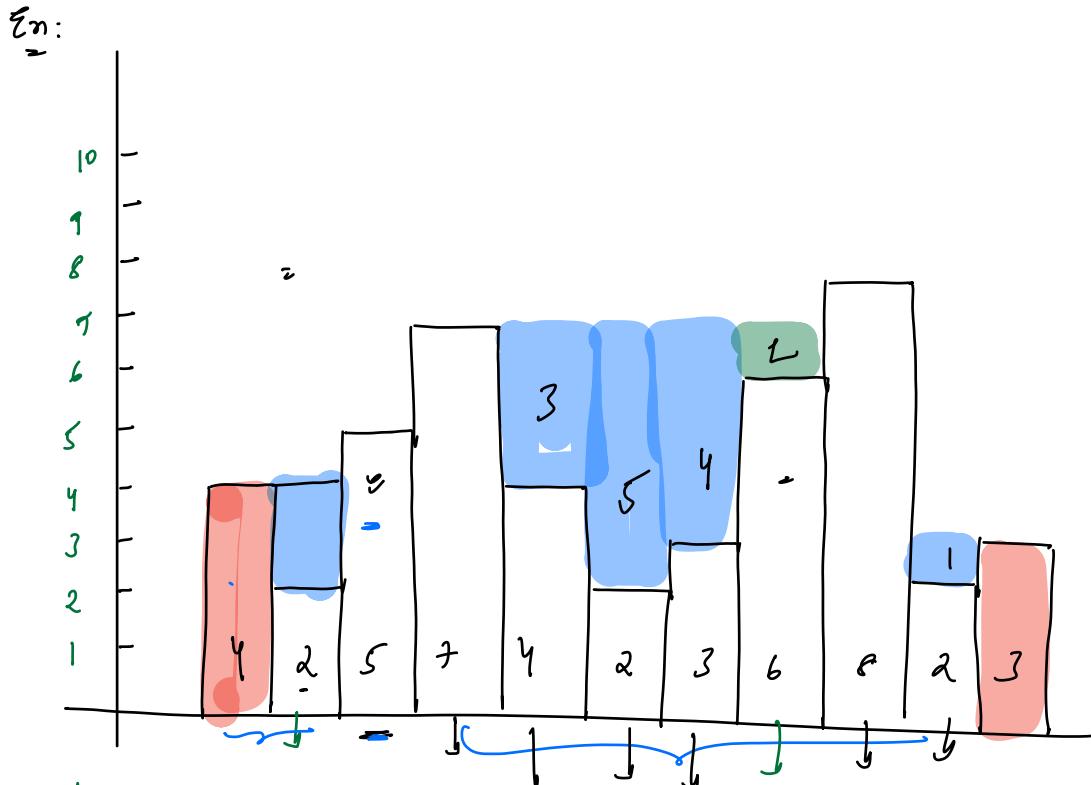

$$\text{Ex: } arr[] = \{2, 1, 3, 2, 1, 2, 4, 3, 2, 1, 3, 1\}$$

Solu: Calculate sum of water accumulated in each building

$L :$  4 4 5 7 7 7 7 7 8

$R :$  8 8 8 8 8 8 8 3 3

$H : \min(L, R) :$  4 4 5 7 7 7 7 3 3

$V : H - ar[i] :$  2 ~~-1~~ ~~-2~~ 3 5 4 1 ~~-5~~ 1 = 16

~~water~~  
no

## 1) Pseudo Code

TC :  $O(N)$  SC :  $O(N)$

$ans = 0;$

$\nearrow \{$  Because curr building no water }

$i = 1; i < N-1; i++ \}$

$\{$  Calculate amt of water  
accumulate on  $i^{\text{th}}$  building

$\left\{ \begin{array}{l} L_{\text{max}} = \max \text{ of all } [0, \underline{i-1}] \rightarrow \text{PfM}[i-1] \\ R_{\text{max}} = \max \text{ of all } [\underline{i+1}, N-1] \rightarrow \text{SfM}[i+1] \end{array} \right\} \text{ optimize}$

$H_{\text{level}} = \min(L_{\text{max}}, R_{\text{max}})$

$w = \min(H_{\text{level}} - ar[i], 0)$

$ans = ans + w$

Q8) Given  $N$  Array Elements, Calculate Max Subarray Sum

Continuous part of an array

Ex:  $a[7] = \{ 3, 2, -6, 8, 2, 9, 4 \}$

→ Not Subarray  
→ Subarray  
→ Subarray  
→ Subarray

Ex:  $a[7] = \{ -3, 2, 4, -1, 3, -4, 3 \} \rightarrow \text{Ans} = 8$

0 1 2 3 4 5 6  
-3 2 4 -1 3 -4 3  
G  
8

Approach 1:

for every subarray

Iterate & get

sum:  $\underline{\underline{O(N^3)}}$

Approach 2:

↙  
get all subarray sums using pf[] ↘  
get all subarray sums using carry forward

Tc:  $\underline{\underline{O(N^2)}}$

Sc:  $\underline{\underline{O(N)}}$

Tc:  $\underline{\underline{O(N^2)}}$

Sc:  $\underline{\underline{O(1)}}$

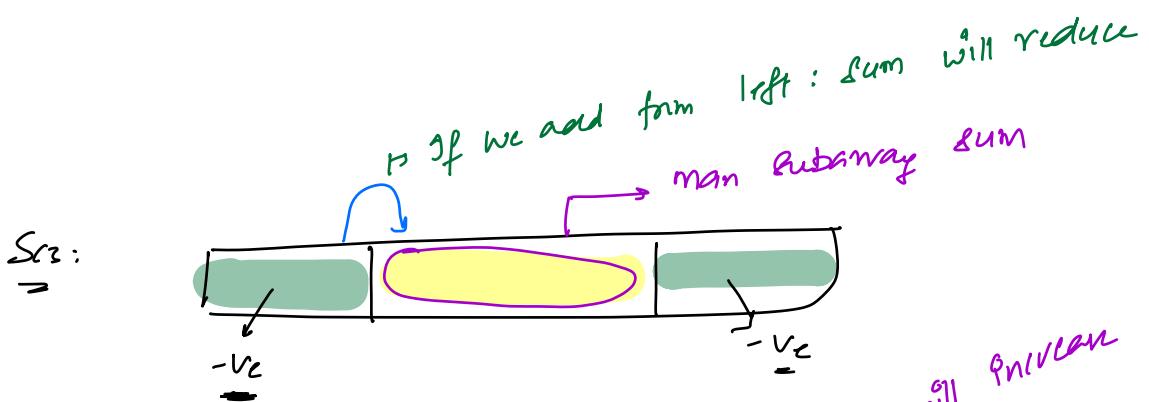

→ (Kadane's Algo)

1

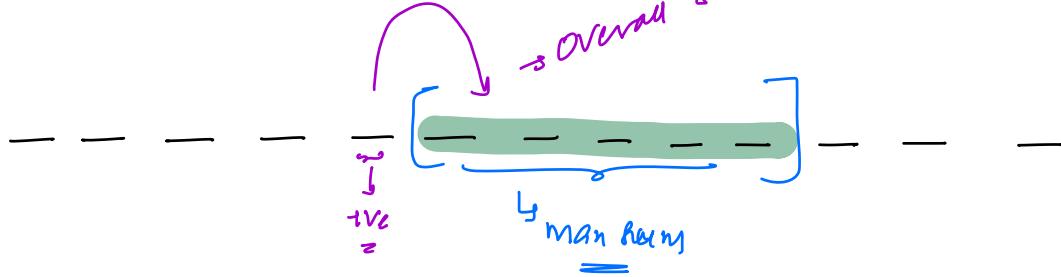

S<sub>c1</sub>: All your elements  $\geq 0$  : Entire array is  $\text{acc} \checkmark$

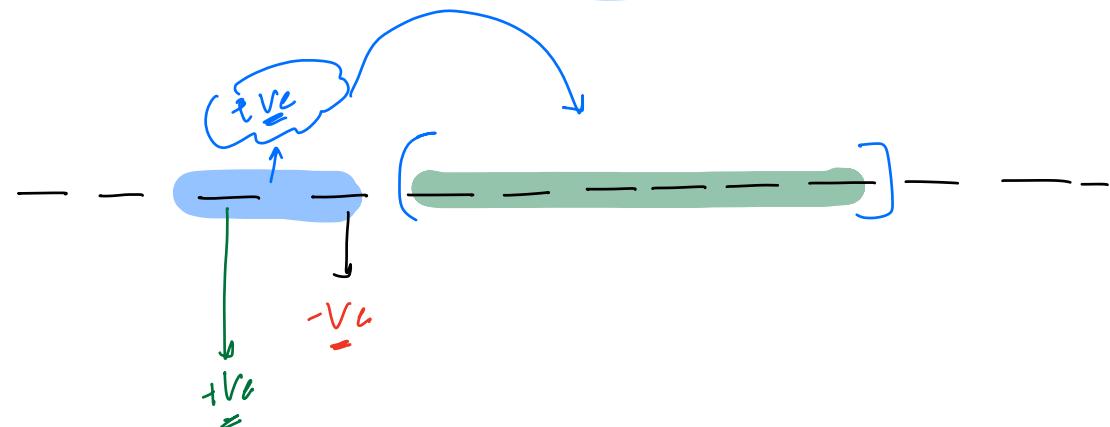

S<sub>c2</sub>: All your elements  $< 0$  : Plan of Entire array -

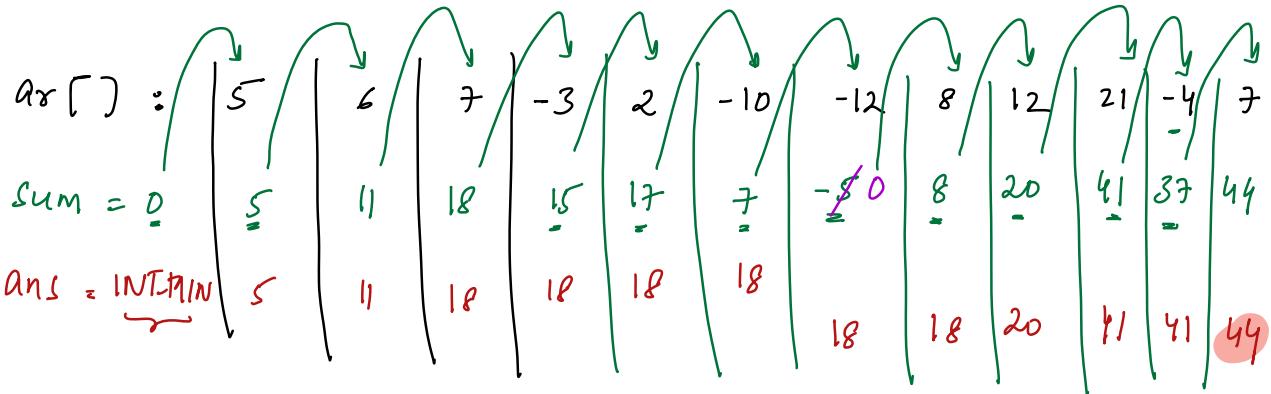

S<sub>c3</sub>:

S<sub>c4</sub>:

If sum > 0 only then we will carry sum

$$S = 0$$

$$a = (\text{INT\_MIN}) \wedge ar[0]$$

$$P = 0; P < N; P++ \}$$

$$S = S + ar[i]$$

$$a = \max(a, s)$$

$$\text{if } (S < 0) \{$$

$$| \quad S = 0$$

}  
return a;

$$TC \geq O(N)$$

$$SC \geq O(1)$$
