Q3) Given N array elements, every element repeats twice except 1, find unique element?

$$ar[7] = \{ 3 \ 2 \ 3 \ 7 \ 2 \ 8 \ 7 \}$$

// ans = {nr of all elements}

$$\begin{array}{l} \underline{Tc: O(N)} \\ \underline{Sc: O(1)} \end{array} \quad \left\{ \begin{array}{l} \{ 9: 50PM \} \\ \underline{\underline{=}} \end{array} \right.$$

Q8) Every element repeats thrice except 1 unique element 3 L

Constraints

find unique element

$$\left. \begin{array}{l} 1 < N < 10^6 \\ 1 < ar[i] < 10^9 \end{array} \right\} ar[7] = \{ 3, 7, 6, 7, 7, 3, 3 \}$$

$ar[13] : 5, 7, 5, 4, 7, 11, 11, 9, 11, 7, 5, 4, 4$

Idea 1: For every element get frequency by iterating in array

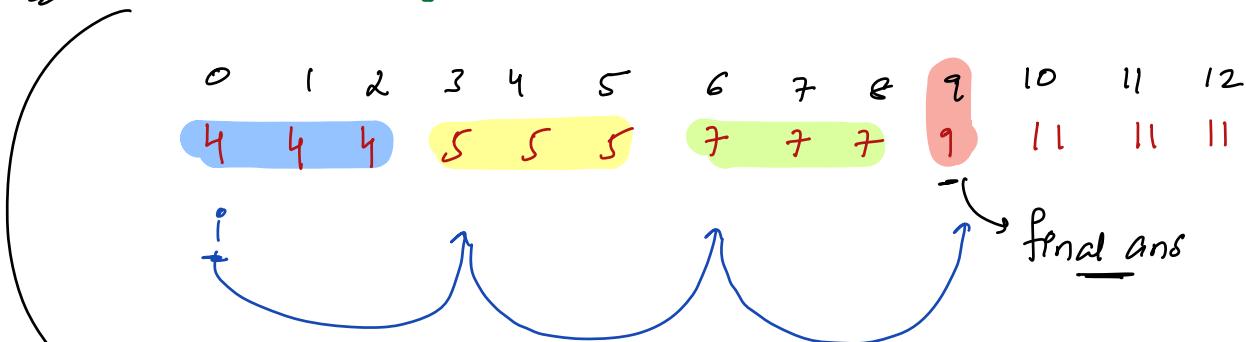

$$TC: O(N^2) \quad SC: O(1)$$

Iterate & get freq

Idea 2: For every element get frequency using hashmap

$$TC: O(N) \quad SC: O(N)$$

Idea 3: Sort the array + (Iterate & check every 3, get unique El.)

$$TC: O(N \log N + N) \quad SC: O(1)$$

$ar[13] : 5 \ 7 \ 5 \ 4 \ 7 \ 11 \ 11 \ 9 \ 11 \ 7 \ 5 \ 4 \ 4$

	3	2	1	0
5 :	0	1	0	1
7 :	0	1	1	1
5 :	0	1	0	1
4 :	0	1	0	0
7 :	0	1	1	1
11 :	1	0	1	1
11 :	1	0	1	1
9 :	1	0	0	1
11 :	1	0	1	1
7 :	0	1	1	1
5 :	0	1	0	1
4 :	0	1	0	0
4 :	0	1	0	0

$$\begin{array}{cccc} 4 & 9 & 6 & 10 \\ 4y_0/3 & 9y_1/3 & 6y_2/3 & 10y_3/3 = 1 \end{array}$$

$$\begin{array}{l} ans = 0 \\ \hline 1 \ 0 \ 0 \ 1 \end{array}$$

$$2^3 + 0 + 0 + 2^0 = \underline{\underline{9}}$$

Idea: For every bit position, iterate on array & count number of set bits = count

if ($\text{count} \% 3 == 0$) { In unique element i^{th} bit unset }

else { // set }

Pseudocode

$\text{ans} = 0$

$i = 0; i < N; i++ \{$

// for i^{th} bit get no. of set bits

$c = 0$

$j = 0; j < N; j++ \{$

If ($\text{checkBit}(A[j], i)$) { $c = c + 1$ }

}

If ($c \% 3 == 0$) { // In unique elem i^{th} bit set }

$\text{ans} = \text{ans} + 2^i (1 \ll i)$ } Both approach

$\text{ans} = \text{ans} | (1 \ll i)$ } are correct?

}

return ans;

TC: $31 * N \Rightarrow O(N)$ SC: $O(1)$

Versions:

V_1 : Every element repeats three except 1:

V_2 : Every element repeats three except 1, (comes 2 times)

$$CY.3 == 2$$

V_3 : Every element repeats 5 except 1, (comes 1 time)

$$CY.5 == 1$$

V_3 : Every element repeats 5 except 1, (comes 2 times)

$$CY.5 == 2$$

V_3 : Every element repeats 5 except 1, (comes 3 times)

$$CY.5 == 3$$

38) Given N Elements every element repeats twice

concept 2 unique elements, find the 2 unique elements
will comes = 1

Ex: $ar[6] = \{ 3 \underline{6} \ 4 \ 4 \ 3 \underline{8} \} : \{ 6 \ 8 \}$

$$ar[4] = \{ \underline{4} \ 9 \ 9 \underline{8} \} : \{ 4 \ 8 \}$$

idea₁: for every element, iterate & get frequency == 1

$$\underline{TC:} \ N * O(N) \Rightarrow O(N^2) \quad \underline{SC:} O(1)$$

optimize

idea₂: for every element, get frequency using HashMap

$$\underline{TC:} O(N) \quad \underline{SC:} O(N)$$

no extra
space

idea₃: Sort the array + (Iterate & get unique elements)

{ same elements }
come together }

$$\underline{TC:} O(N \log N + N) \quad \underline{SC:} O(1)$$

idea₄: XOR of all Elements?

Ex: $ar[8] = \{ \underline{3} \ ^ \underline{7} \ ^ \ 6 \ ^ \ \underline{7} \ ^ \ \underline{3} \ ^ \ 8 \ ^ \ \underline{9} \ ^ \ \underline{9} \} = 6 ^ 8 = 14$

using 14 we cannot 2 unique elements?

$arr[12]$

3 2 1 0	(1010)	(1000)	(1100)	(0110)	(1010)	(1100)
10	8	8	9	12	9	6
	(1000)	(1001)	(1001)	(1011)	(1011)	(0110)

1) nr of all Element

$$val = 11^1 17$$

= (nr of 2 unique)

11 :	0	1	0	1	1
17 :	1	0	0	0	1

$$(11^1 17) : 1 \ 1 \ 0 \ 1 \ 0$$

Obs:

At bit pos 1: diff :

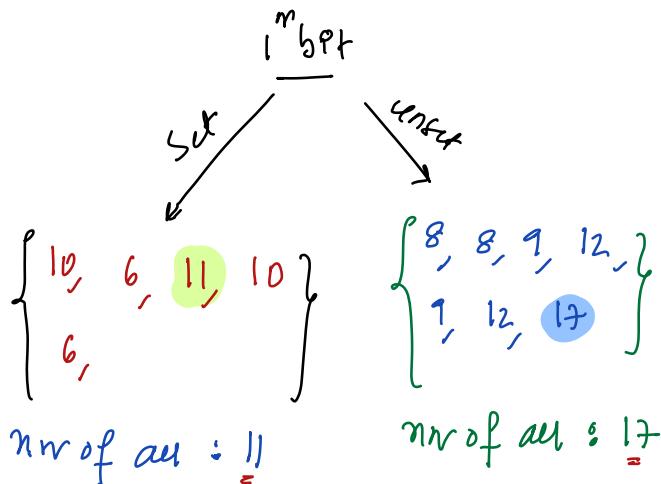

At bit pos 3 : diff

At bit pos 4 : diff

Take any set bit

position in nr value

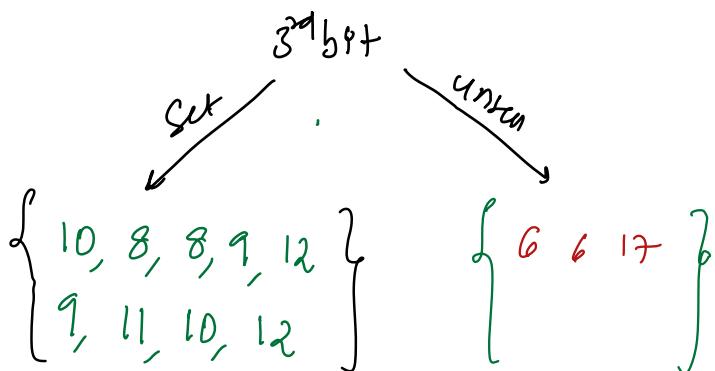

// Say Split array based on 1st bit pos

nr of all : 11

nr of all : 17

// Say split array based on 3rd bit pos

nr of all : 11

nr of all : 17

Code: (nr of all elements)

Step 1: $v = 0;$
 $p = 0; i < N; i++ \{ v = v \wedge ar[i] \}$ } $\Rightarrow O(N)$

Step 2: for v get a 1st bit position

```

 $v = 0; i = 30; i++ \{$ 
  if (checkBit(v, i)) {
    pos = i; break;
  }
}

```

$O(1)$

At pos both unique
elements have diff
set bits

Step 3: Split array based on Set q Unit based on pos

```

 $p = 0; i < N; i++ \{$ 
  if (checkBit(ar[p], pos)) {
    set = set  $\wedge$  ar[i];
  } else {
    unset = unset  $\wedge$  ar[i];
  }
}

```

$O(N)$

TC: $O(N+1+N) \Rightarrow O(N)$

SC: $O(1)$

Step 4: 2 unique elements : (Set / Unset)

Q8 Given N Array Element, array contains all elements from $[1 \ N+2]$ except 2 elements, find 2 missing elements

$$\text{arr}[4] = \{3 \ 6 \ 1 \ 4\} \rightarrow [2, 5]$$

missing elements

$$\text{arr}[5] = \{1 \ 6 \ 4 \ 7 \ 5\} \rightarrow [2, 3]$$

missing elements

Solutions:

Try it on your own → Hashmap → keeping an element
 → bool ch[N+2] in its position
 → Sort
 → BF

$$\text{arr}[5] = \boxed{\{1 \ 1 \ 6 \ 4 \ 7 \ 5\}} \quad \boxed{\{1 \ 2 \ 3 \ 4 \ 5 \ 6 \ 7\}}$$

Ans: Every element is repeating except 2 unique elements

a = min of all elements from $[1 \ 7]$

b = max of all elements from $[1 \ 7]$

(a+b) : {min of all elements}

nw of all array elements

Pseudo Code // Given $\text{ar}[N] = \{1, N+2\}$

Step 1: $\left\{ \begin{array}{l} a = (\text{nr of all array elements}) \\ b = (\text{nr of all elements } [1 \underline{N+2}]: (\text{iterate through})) \\ v = a \wedge b \end{array} \right.$

Step 2: Step bit position on $v = \underline{\text{pos}}$

Step 3: $\text{Set} = 0, \text{unset} = 0$

$i = 0; i < N; i++ \{$
 if (checkBit($\text{ar}[i]$, pos) { $\text{set} = \text{set} \wedge \text{ar}[i]$ }
 else { $\text{unset} = \text{unset} \wedge \text{ar}[i]$ }
 }

$i = 1; i = (N+2); i++ \{$
 if (checkBit(i , pos) { $\text{set} = \text{set} \wedge i$ }
 else { $\text{unset} = \text{unset} \wedge i$ }
 }

// Set & unset are missing elements

Tc: $O(N)$ Sc: $O(1)$

{ Repeat a
 Missing Number } } \rightarrow very similar to above question

\rightarrow { Doubts }
